FUNCTION: CATALYZES THE TRANSFER OF A METHLY GROUP FROM 5-
METHYLITETRAHYDROFOLATE TO HOMOCYSTEINE RESULTING IN METHIONINE
FORMATION (BY SIMILARITY).
CATALYTIC ACTIVITY: 5-methyltetrahydropteroyltri-1-glutamate +
CATALYTIC ACTIVITY: 5-methyltetrahydropteroyltri-1-glutamate +
CATALYTIC ACTIVITY: 5-methyltetrahydropteroyltri-1-Glutamate +
CATALYTIC SINC; BINDS ONE ION PER SUBUNIT (BY SIMILARITY).
COPACTOR: ZINC; BINDS ONE ION PER SUBUNIT (BY SIMILARITY).
PATHWAY: TERMINAL STEP IN THE DE NOVO BIOSYNTHESIS OF METHIONIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SYNTHASE FAMILY.

score and is No. is the number of results predicted by chance to have a greater than or equal to the score of the result being printed, s derived by analysis of the total score distribution.
